

Mortgage+Care

HARDWARE SPECIFICATIONS

Non Client / Server Model (5 users or less and under 500 loans)

Operating System - Microsoft Window® compatible computer running Windows 98 or above. Windows 7 and 8 are supported.

Disk space requirements - 30 megabyte initial install. Data space requirements should be less than 500 megabytes.

Networking – A shared folder is needed on a server or peer-to-peer network. No software is installed on the Client PC, only a shortcut to the shared folder.

Client / Server back end (over 5 users or high loan volume)

Server - Microsoft Window® Server product: Server 2000 and above.

Client - Microsoft Window® compatible computer running Windows 98 or above. Windows 8 is supported. The only files required on the client are MICR fonts for check printing. Thin clients supported.

The Server software is self-tuning. No DBA required. A power user will have the ability to control users through a GUI interface.

Remote Connections

Mortgage+Care supports remote connections via Microsoft Remote Desktop Connection (RDC), VMware, and other products. Remote connection from Apple Macintosh, iPad, and Android clients is also supported (third party applications required for server connection).

Web Portals

The investor and borrower web portals run on any browser including smartphones and tablets. Connections to the database are encrypted secure socket https.

Microsoft Office

The Doc Prep module merges with Microsoft Office. We support all versions. Mail merge components may need to be installed from the Office CD.
